Web Developing Team
Director of Recruitment
Shanghai, China

Dear Recruiting Manager,

I first became interested in web design when I started taking a computer class at university. This interest is leading me to pursue opportunities where I can learn and grow into a more advanced computer programmer, which is precisely why your role caught my attention. I love using Apple's products, and I never hesitate to choose Apple over any other software or hardware. Please accept this letter as part of my application for your Web Developer Engineer internship, role number 200434156. I admire Apple, Inc.'s leadership in the tech industry as well as your development paths for young talent. I would love the opportunity to be involved with such a dynamic company through acceptance into your Web Developer Engineer Program.

As a current third year student at the University of South Carolina, majoring in Operations and Supply Chain, Computer Science, and Finance, I believe that my diverse course work and work experience will translate well to your company. Previously, I worked as a data analyst intern for Stratifyd. I am confident in my ability with large data sets and unstructured data analysis. I utilized Java to simplify customer call data to be able to gain the insights needed. Based off the job description on your website, I feel that my strong experience with data analysis, supply chain and logistics, and computer skills as well interpersonal skills would be a valuable asset to your team.

In my current Capstone Supply Chain project, I work with Tableau to create visualizations. I have learned SQL as well. I see these processes as being very similar to data analytical skills required for the internship position. I have excelled in my computer programming courses and have created code using Java and C++. In my computer class currently, I am learning how to my own website using HTML. I know that these skills are in common with your required qualifications. Additionally, I was born and raised in China and studied in American for over twelve years, I am fluent communicator in English and Mandarin.

The combinations of these attitudes and skills align very closely with Apple's Web Developing Team team's duties and values. My affinity for computers, interpersonal skills, English and Mandarin skills would prove valuable in your workplace. Combining attributes of supply chain with computer science is precisely the industry that I want to work for, and I would be excited to be a part of it. Thank you for taking the time to review this application. I look forward to speaking with you during an interview.

Sincerely,

ShuYue Zheng
