Allston, Massachusetts 02134

Hello humanID,

Since high school, I have always had a strong passion for working with cyber security specialists or any role in the field. When I was not sure what I really wanted to do, my school counselors motivated me for this career. I believe I am an eligible person for this position because of all the malware threats out there. I can take a step towards this issue and use my techniques to prevent such attacks. I plan on working as a malware detector and then aim for higher positions such as network specialist and cyber security professional.

By taking few courses in University of South Carolina, I have learned two programming languages: Java and Linux. These courses really made me think out of the box and apply certain skills to achieve the outcome. As well as with the help of my peers in classes, I had the opportunity to experience their ideas towards class projects we would do and their involvement throughout the course.

Though I do not have enough background regarding the internship, I hope to learn through this process and gain more understanding of how your company works and how I can contribute.

Sincerely,

A handwritten signature in black ink that reads "Nikitha Kondapeta".
